**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. **Claim 1** is rejected under 35 U.S.C. 103(a) as being unpatentable over **Andoh US patent 5,130,383** in view of **Lucas US patent 5,691,582**.

**Andoh'383** discloses a linear motor (Fig.1) of the moving coil type including, a stationary magnets array (12, column 4 line 13 Fig.1), a coils assembly (7a,7b,7c, column 3, line 68, Fig.1) movable along a mechanical guide (10, 10a, column 4, line 9) and facing said magnet array (12) a sensor for sensing the position (column 2, line 53) of said coils assembly relative to said magnets a motion controller (column 2 line 62) with power amplifier ((24,25,26, column 5, Fig. 6,9,10) that accepts position signals from said sensor and generates currents for the energizing the coils assembly (see Fig. the coils 7a,-7c).

However **Andoh'383** fails to teach a linear motor having brushes.

**Lucas'582** discloses a linear motor having sliding brushes (column 9, line 3) for the purpose of energizing the stator coil.

Therefore it would have been obvious to combine **Andoh'383** linear motor with sliding brushes as taught by **Lucas'58** for the purpose of energizing the stator coil.

Art Unit: 2834

**Claim 2** is rejected under 35 U.S.C. 103(a) as being unpatentable over combination of **Andoh'383** and **Lucas'58** as applied to claim 1 above, and further in view of **Gal US patent6,341'563**

However the combination of **Andoh'383** and **Lucas'58** fails to teach a wireless sensor.

**Gal'563** discloses a wireless sensor (column 1,Line 21-25) for the purpose of sensing the position and distance of the moving part (platform )

Therefore it would have been obvious to one having skill in the art at the time the invention was made to combine combination of **Andoh'383** and **Lucas'58** linear motor with a wireless sensor as taught by **Gal'563** for the purpose of sensing the position and distance of the moving part (platform)
